Blockchain Engineer

As a blockchain engineer with over 5 years of experience, I've been at the forefront of Decentralized Finance innovation, from co-founding multiple blockchain protocols to driving cross-chain advancements at SavvyBooks. My expertise spans Solidity, token engineering, and cross-chain integration, skills I've honed while working with industry leaders in the Ethereum and Solana ecosystems. At SavvyBooks, I engineered a universal EVM chain interaction tool that surpassed Etherscan's capabilities, enabling historical state queries and diamond proxy contract interactions. This innovation streamlined our data entry process, reducing manual query time by 70% and significantly enhancing cross-team efficiency. I also spearheaded the integration of Solana with our existing EVM-based systems, expanding our market reach by 30% and unlocking access to a \$10B ecosystem. My background in mathematical modeling and software optimization, combined with my degree in Software Development and Entrepreneurship positions me uniquely to craft precision-engineered solutions that bridge complex blockchain technologies with practical business needs.

Technical Proficiencies

Technologies:	EthersJS Truffle Ganache Hardhat Node. JS Postgres Express Svelte MongoDB Git Bash Tailwind BigNumberJS Mocha Chai
Languages:	JavaScript Typescript Python Solidity HTML CSS Java
Software:	Linux MacOS Windows
Key Skills:	Mathematical Analysis & Modelling Computer Programming Blockchain & Crypto Currency Technical Documentation

Career Experience

Savvybooks

September 2023 – Present

Co-founder/ Blockchain Engineer

Played a key role in expanding the platform's blockchain ecosystem support, improving developer productivity, and optimizing data management processes. Demonstrated expertise in smart contract development, DevOps automation, and blockchain data analysis, contributing to substantial improvements in product performance and market competitiveness.

- Engineered a cross-chain transaction import system, integrating Solana with existing EVM chains, expanding market reach by 30% and unlocking access to a \$10B ecosystem.
- Led the design of a comprehensive GitHub Actions workflow for full-stack application deployment, reducing deployment time by 95% and increasing frequency by 200%.
- Optimized token management processes by creating a consolidated token list application, reducing backend API requests by 80-90% and improving data accuracy by 95%.
- Engineered custom smart contract interactions for LP token price calculations, addressing a critical DeFi analytics gap and enhancing product offering.

sCanto, Canto

Nov 2022 – September 2023

Co-founder/ Blockchain Engineer and Systems Network Operations

Led the design and implementation of critical systems for asset staking, network monitoring, and performance optimization, significantly enhancing the project's reliability and operational efficiency. Played a pivotal role in ensuring the integrity and security of substantial digital assets while driving technological innovation in a complex, multi-cloud environment.

- Optimised software to handle funds worth 4.5 M\$ as of writing.
- Orchestrated the setup of an expansive 8+ node Linux network across three distinct cloud providers and multiple data centers.
- Implemented and oversaw the secure staking mechanism, safeguarding assets worth 1.5M\$ (3 million canto).
- Instituted advanced monitoring solutions combining the power of BetterUptime and NGINX.

ElasticSwap, Ethereum & Avalanche

Managing Director/Software Engineer

Nov 2021 – Nov 2022

Played an integral part in designing entire Solidity code base of automated market maker. Create open-sourced math library in Solidity. Develop test suite and lead active maintenance of open-source SDK in JS. Leverage token engineering skills and mathematical modelling/analysis of overall decay and rebase dynamics in automated market maker.

- Optimised software to handle funds worth 4.5 M\$ as of writing.
- Persuaded CEOs and different investors to continue investing in company's project worth \$2.5M.
- Built complex automated market maker with a focus on providing facilitation to rebasing financial instruments.

ElasticDAO, Ethereum

Managing Director/Software Engineer

Oct 2020 – Nov 2021

Represented as one of main developers of math library in Solidity for creation of test suite and maintenance of SDK. Launched world's first asset-backed, rebasing governance token through token engineering and mathematical modelling of the overall rebase processes. Improved frontend dApp by adding new features on regular basis. Managed and reported critical bounty.

- Expanded to more than 1K users.
- Described and white boarded all complex math behind financial instruments.
- Assisted in organisation and composition of \$5M worth of Ethereum in smart contracts.
- Designed all mathematical software for first-ever asset-backed security through token rebasing.
- Eliminated a high-level severity mathematical bug in code, a threatening error to company's funds.
- Prepared technical documentation, a single point of contact for 10K existing clients and prospects.

Education

Bachelor in Software Development and Entrepreneurship – Honours, 2022, GPA 5.0
Estonian University of Applied Sciences, Tallinn, Estonia

Final Thesis: The Existence of Decentralised Autonomous Organisations in the Decentralised Finance

Awards

Ülo Pärnits Scholarship Award – Exemplary Performance in academics and entrepreneurship.
Acknowledged as First-Ever Asian Student on Winning Award.
